Welcome and Introductions

Topic:

- Montana Medicaid Primary Care Case Management Programs Jacqui Roberts
Care Management Section Supervisor
Health Resources Division

- This training will cover the primary care case management (PCCM) programs currently overseen by the department. We will examine the requirements of these programs, as well as their similarities and differences for providers participating in them. Additionally, we will discuss how this information relates to the Health Resource Division's primary care redesign project. Importantly, this redesign project aims to consolidate four of the five existing PCCM programs in Montana into a single, value-based model. We will explore the concept of value-based care, which focuses on improving patient outcomes and quality of care while controlling costs, and how it works with a fee-for-service model.

Questions/Comments/Concerns

- Providers are encouraged to ask questions, initiate comments, or concerns.

Next call:

- December 17th, 2024, 9:00 am - TBD
